# GO Productivity's
# Lean Six Sigma Green Belt

Lean Six Sigma Green Belt is a deep-dive training program that develops the capacity to support improvement initiatives in your company. This program trains participants to a full Lean Six Sigma Green Belt level and is intended for those that will lead improvement projects, working with and supporting functional managers throughout your organization.

## Objectives & Benefits

- Applied learning: Participants undertake a live project in their workplace apply immediately apply the learned concepts as they work through a live project
- Participants receive coaching by GO Productivity's Master Black Belt instructor on their in-house project(s)
- Participants receive complete exposure to the DMAIC (Define, Measure, Analyze, Improve, Control) methodology and associated tools.
- Participants receive Lean Six Sigma materials and templates in order to gain a better understanding and improved capabilities to tackle productivity improvement
- Builds an internal capacity for productivity improvement and helps create a climate of innovation

## Added Value

- Participants are provided soft copy (electronic) templates of **25 Lean Six Sigma tools** covered in the course, such as the Project Charter, Failure Mode & Effects Analysis (FMEA), Cause and Effect (C&E) Matrix, and Process Management Chart.

- GO Productivity also comes alongside as you work your in-program Green Belt project and the subsequent projects required for certification, giving you access to experienced and knowledgeable coaching and mentoring from our Master Black Belt.

- The sponsoring organization develops internal capacity to support their productivity improvement initiatives

- In addition to learning the concepts in the classroom, participants are required to apply them at their workplace as they work through their Green Belt project. During the in-class training weeks, participants present updates on their projects to their peer and instructors.
